>They simply have the bandwidth and we don't. They have eight wires coming
>in, digitize the voices into eight time slots at 64kb, send the 64kb out
>over a broad band wireless (microwave), demod into eight voices at the
>other end, and send them out over eight wires.

Inmarsat-M phones digitize voice in 4.8 kBaud, but they use spread-spectrum
in stead of normal single channel transmission.

But nevertheles it must be possible to use digital voice over
a 10 kHz FM channel.

Gerrit, PA3BYA.

To: info-hams@ucsd.edu

I need to know if there are some "mountain rescue frequencies" or "emergency frequencies" in Iceland.
I'm planning a travel in this country and will take a 2m transceiver (140 - 150 MHz).
Thank's in advance.

Christophe

Sure, go ahead. I don't need to talk to you. :)
